Fertilizing Balt.

The Vermont Experiment Station at Burlington weighed ten clusters of grass from two plots of land lying side by side. From the unsalted plot the ten plants weighed 14 grams, while from the plot which had received 3,000 pounds of salt per acre, they weighed 26 grams or nearly twice as much.

Speaking of its effectiveness in killing Hawk Weed, or Paint Brush, the experi-ment station bulletin says: "Most of the weed was killed by the application of 2,000 pounds per acre. Every plant of it was killed by the application of 3,000 pounds per acre and the weight of the grass was nearly doubled."

FERTILIZING SALT can be obtained of C. S. Page, Hyde Park, Vt, at \$4.00 per ton in carload lots; and \$4.50 in less than car load lots, put up in cheap 100-lb sacks—no charge for sacks. At this price the Salt is delivered on board the cars at Hyde Park. Low, special freight rates have been arranged to all points on the St. J. & L. C. and Boston & Maine railroads in Northern Vermont.

In June, 1895, she fell and broke her hip, it was generally supposed, though she firmly believed it was not broken, and with wonderful patience and courage determined to get well, and did recover so far as to walk with only a cane for support. When in March 1901 her husband became very ill and was taken to the hospital, her home was broken up for a time. Her health gradually failed, but all this time her uncomplaining courage was helpful to others. She united with the Congregational church in Sept., 1843, and 60 years has been a faithful member, always interested in its welfare.
